

**WINBASIC**<sup>®</sup>  
Technology Solutions  
- EST 1996 -

**An affordable and efficient transition from old infrastructure to a cloud based solution.**

## **PANAPOWER WHOLESALE DISTRIBUTOR**

Client since 2000

Established in 1995, this company is one of Australia's largest wholesale distributors of a range of electronic consumer products.

### **CHALLENGE:**

**This company was experiencing problems with their legacy server and infrastructure, and were concerned about levels of security and back up. They had considered moving to the cloud, but were unable to as the neighbourhood telecommunications infrastructure needed to be updated first.**

### **SOLUTION:**

**Winbasic implemented a virtualised server environment with a 4 hour backup system.**

Key to this system was the built in backup at lunchtime. In the event of a crash in the afternoon, the system can be recovered by the lunchtime backup instead of the previous night, thus saving hours of crucial data. As a leading wholesale distributor, it is critical a comprehensive disaster recovery system is implemented.

### **RESULT:**

**In the event of a crash, this company will only lose a maximum of 4 hours downtime. Loss of data is minimised as well.**

When the local telecommunications infrastructure is upgraded, the client will be able to move to the cloud environment without having to spend money on in house infrastructure. The old server and infrastructure would have become obsolete anyway once the client to the cloud.

This was an efficient and affordable strategy to manage the transition stage from old, legacy infrastructure to a solution entirely based in the cloud.
